The global Polyfunctional Acrylate Monomer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Multifunctional acrylate monomers refer to acrylate monomers with multiple functional groups (polyfunctional groups), where the functional groups usually refer to reactive functional groups, such as double bonds. These multifunctional acrylate monomers play a key role in polymerization reactions because they can introduce cross-linking points and change the structure of the polymer, thereby affecting its properties. These monomers are usually used to prepare polymer materials with specific properties, such as coatings, adhesives, photocurable resins, etc.
