3D printing can be done with almost 170 different types of materials but most people choose to 3D print their models in PLA (Poly Lactic Acid) because it is one of the eco-friendliest bio plastic available in the market today. PLA is 100% recyclable, bio-degradable, bio-compatible and also very strong as compared to other materials. For the above reasons it is becoming the most popular and widely accepted material for printing. Polylactic acid is extracted from Lactic acid, (i.e. from renewable raw materials) which is a renewable resource and is used as a natural substitute for petroleum-based plastic and polyster products.
