Abstracts

The global Poly(m-xylylene Adipamide) market size is predicted to grow from US$ 416 million in 2025 to US$ 634 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Poly(m-xylylene adipamide), commonly known as MXD6, is a semi-aromatic crystalline polyamide produced by the polycondensation of m-xylylenediamine (MXDA) and adipic acid. It is known for its exceptional gas barrier properties against oxygen and carbon dioxide, high mechanical strength and rigidity, and good dimensional stability. However, MXD6 has a low flame retardancy, requiring modifications to meet safety standards for certain applications.

In 2024, global Poly(m-xylylene Adipamide) production reached approximately 43 k tons, with an average global market price of around US$9500 per ton. The typical single-line production capacity for this product is approximately 3,000-8,000 tons/year, with leading companies reaching tens of thousands of tons. The industry's gross profit margin is approximately 15%-25%. Raw materials account for the largest portion of costs (70-80%), followed by energy, labor, and depreciation, each accounting for approximately 20%-30%. The main upstream raw materials for this product are meta-xylene diamine (MXDA) and adipic acid. Its downstream applications include food and beverage packaging bottles (oxygen barrier layers), films, barrier nylon composites, automotive parts, and electronic and electrical components.

United States market for Poly(m-xylylene Adipamide) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
