According to our LPI (LP Information) latest study, the global Polymer Modified Asphalt market size was valued at US\$ million in 2023. With growing demand in downstream market, the Polymer Modified Asphalt is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Polymer Modified Asphalt market. Polymer Modified Asphalt are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Polymer Modified Asphalt. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Polymer Modified Asphalt market.

Polymer Modified Asphalt has high elasticity and thermal stability. An asphalt concrete surface based on PMB is highly resistant to the formation of ruts, withstands high traffic loads, and is crack-resistant at low temperatures. There are three main components in PMB production. Firstly, conventional asphalt is used as a base. Secondly, there is a plasticizer which gives the bitumen plasticity and improves dilution of the polymer. And the third component is the polymer itself. The process used to produce PMB involves mixing these three components using a specific production process.

In Europe and Asia, 5 largest manufacturers of Polymer Modified Asphalt are Total Bitumen, Nynas, Gazprom Neft PJSC, Shell and ExxonMobil, which make up over 10%. Among them, Total Bitumen is the leader with about 24% market share. In terms of

product type, SBS Modified Asphalt occupies the largest share of the total market, about 62%. And in terms of product Application, the largest application is Road Construction & Paving, followed by Roofing.
