## Abstracts

The global Polymer Prefillable Syringes market size is predicted to grow from US\$ 2913 million in 2025 to US\$ 4352 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Polymer prefillable syringes are advanced drug delivery systems made from high-performance polymers that allow for the pre-filling of injectable medications. These syringes are designed to ensure sterile conditions and preserve the stability of sensitive biologics and pharmaceuticals. Unlike traditional glass syringes, polymer prefillable syringes offer advantages such as reduced weight, enhanced break resistance, and lower risk of breakage during handling and transportation. They can be customized for various applications, including vaccines, monoclonal antibodies, and other therapeutic agents.

Polymer Prefillable Syringes (PFS) are sterile, single-use injectable drug containers made from advanced polymers such as cyclic olefin polymer (COP) or cyclic olefin copolymer (COC), offering a high-performance alternative to traditional glass syringes. Polymer PFS are particularly well-suited for biologics, monoclonal antibodies, mRNA vaccines, and self-injection therapies, where drug stability, safety, and usability are critical. The shift toward polymer-based formats is increasingly driven by the need for drug-device combination products and enhanced patient-centric delivery systems.

Key advantages of polymer PFS include superior chemical inertness, eliminating risks associated with metal ion leaching, silicone oil interaction, or protein denaturation—making them ideal for sensitive formulations. Their outstanding mechanical robustness prevents breakage during transport or use, while precision molding capabilities support ergonomic and customized designs, especially for

integration with auto-injectors or pen injectors. Their low extractables/leachables profile and tight dimensional control also enable compatibility with high-speed filling lines and long-term stability.

Global market leaders like SCHOTT, BD, Terumo, and Nipro are investing heavily in polymer PFS platforms, while emerging players in Asia, including Chinese and Japanese firms, are advancing local production capacity. Given the booming biologics pipeline, the growth of chronic injectable therapies (e.g., GLP-1s), and greater demand for patient-friendly delivery systems, polymer PFS are expected to capture an expanding share of the prefilled syringes market over the next 5–10 years.
