The global Polymer Recycling Additives market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Polymer recycling additives are a type of functional additives specifically used to improve the performance of recycled polymer materials, aiming to improve their reprocessing performance and final product quality. These additives can enhance the melt fluidity, thermal stability, oxidation resistance and mechanical properties of the material, helping to offset the degradation of the polymer during the recycling process. In addition, they can also improve the UV resistance and color stability of recycled polymers, ensuring the appearance and performance of the products after recycling. They are widely used in the recycling of polyolefins, polyesters and other polymers, helping to achieve sustainable resource management.

United States market for Polymer Recycling Additives is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
