The global Polymer Sensor market size is predicted to grow from US$ 1014 million in 2025 to US$ 1722 million in 2031; it is expected to grow at a CAGR of 9.2% from 2025 to 2031.

Polymer sensor is a functional sensor that introduces small molecule sensors into polymer structures, and uses the special properties of polymer materials and the interaction between substances and polymers to detect parameters such as substance concentration, temperature, and pressure. The core part of the polymer sensor is the sensing layer, which is mainly composed of polymer materials. When the target substance enters, it will interact with the polymer and generate a signal output, thereby realizing the detection of the target substance.
