The global Polymer Thermistor market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Polymer thermistors are made of polymer materials filled with carbon black particles. This material has a certain conductivity, so it can pass the rated current. If the current passing through the thermistor is too high, its heating power is greater than the heat dissipation power. At this time, the temperature of the thermistor will start to rise continuously, and the polymer matrix in the thermistor will start to expand, which separates the carbon black particles and causes the resistance to rise, thus effectively reducing the current in the circuit.

United States market for Polymer Thermistor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Polymer Thermistor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Polymer Thermistor is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
