Polymeric catalyst resins (ion exchange resin type) are polymeric materials based on ion exchange resins, utilizing acidic (e.g., -SO₃H) or basic (e.g., -NH₂) functional groups on their backbones for catalysis. Unlike their traditional ion exchange role, these resins act as solid catalysts by providing acid/base sites to facilitate organic reactions (e.g., etherification, esterification, hydrolysis), featuring easy separation and reusability. They are widely used in chemical processes like MTBE synthesis and ester production.
