Polymeric phosphonates are a class of chemical compounds composed of repeating units that contain phosphonate functional groups. These compounds are characterized by the presence of phosphorus atoms bonded to oxygen and carbon atoms in a specific arrangement. Phosphonates are organic derivatives of phosphonic acid (H_3PO_3), where one or more hydrogen atoms are replaced by organic groups or other substituents.

Polymeric phosphonates were increasingly used as flame retardants in various industries, including construction, automotive, and electronics. The demand for fire-resistant materials and products was driving this trend, particularly in response to stringent fire safety regulations.
