Implant medical device is a medical device manufactured to replace a missing biological structure, support a damaged biological structure, or enhance an existing biological structure. Medical implants are man-made devices, in contrast to a transplant, which is a transplanted biomedical tissue. The surface of implants that contact the body might be made of a biomedical material such as titanium, silicone, or apatite depending on what is the most functional.[1] In some cases implants contain electronics e.g. artificial pacemaker and cochlear implants. Some implants are bioactive, such as subcutaneous drug delivery devices in the form of implantable pills or drug-eluting stents.[2]

Global Polymers for Implantable Medical Devices key players include DSM, Evonik, KLS Martin, Quadrant, Solvay, etc. Global top five players hold a share about 75%.

Europe is the largest market, with a share about 35%, followed by North America and Japan, having a total share about 40 percent.

In terms of product, Metallic is the largest segment, with a share about 35%. And in terms of application, the largest application is Acetal (POM), followed by Acrylic (hydrogels), Acrylic (MMA, PMMA), Fluorocarbon, etc.
