The global Polyolefin Antioxidants market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Antioxidants are molecules that can slow down or prevent oxidation (often specifically in organisms). Oxidation is a chemical reaction that transfers electrons from a substance to an oxidant. In the process, free radicals can be generated, thus starting the chain reaction. When chain reaction occurs in cells, cells will be destroyed or apoptosis. Antioxidants can remove free radicals, terminate the chain reaction and inhibit other oxidation reactions, while being oxidized. Polyolefin is a polymer compound formed by addition polymerization of olefins. This report studies polyolefin antioxidants.
