The global Polyolefin Transparent Nucleating Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Polyolefin transparent nucleating agent is an additive used in polyolefin plastics, which can improve the transparency, surface gloss and other physical and mechanical properties of plastic products. It improves the transparency and gloss of the product by accelerating the crystallization rate of the polymer, increasing the crystal density and minimizing the grain size. It can also improve the tensile strength, rigidity, heat distortion temperature and impact resistance of the product. This nucleating agent acts as a crystal nucleus during the crystallization process of the polymer and promotes the crystallization of the material.
