The global Polyphenylene Ether Raw Powder market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

As one of the five major engineering plastics, polyphenylene ether (PPE) resin has good flame retardancy, high temperature resistance, electrical insulation, dimensional stability and excellent physical and mechanical properties. The long-term use temperature range of PPE is ?127~121?, and it has excellent dimensional stability and outstanding electrical insulation under long-term load. Therefore, it is widely used in the electronic and electrical industry, automobile industry, industrial machinery and surgical medical equipment. PPE has shortcomings such as poor processing performance and poor impact resistance. In order to improve its processing performance, researchers often combine PPE with polystyrene (PS), polyamide (PA), and polybutylene terephthalate (PBT). mix. Blending modification improves the processing properties of PPE, but also reduces its temperature resistance and flame retardancy to a certain extent. Flame retardants are often added to commercial PPE modified materials to improve their flame retardant properties.

The global chemical industry is part of the global economic development, and the cyclical economic development envelopes the global chemical industry. In recent years, global economic growth has slowed down, and the growth rate of the chemical industry has also gradually slowed down. The development of emerging economies such as China and India has continued to promote the global chemical industry to maintain a certain development trend in the past few years. In the future, these economies will continue to drive the chemical industry market forward with their large population base and strong domestic demand growth. In addition to the influence of the geopolitical

characteristics of the Middle East, the shale gas industry in the United States among developed countries has become the biggest variable in recent years, driving the strong development of the U.S. chemical industry.
