The global Polypropylene Block Copolymer Pipe?PPB Pipes? market size is predicted to grow from US\$ 253 million in 2025 to US\$ 340 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Block copolymer polypropylene pipe (PPB pipe) is a thermoplastic pipe made from propylene and ethylene block copolymers, known for its excellent low-temperature impact resistance, good heat resistance, and toughness. Due to its high impact resistance, this pipe material is widely used in municipal drainage, underfloor heating systems, and industrial piping networks, and features corrosion resistance, ease of installation, and a long service life.

The upstream raw material is block copolymer polypropylene, a special plastic in which ethylene-propylene rubber blocks are introduced into the polypropylene molecular chain, possessing extremely high impact resistance, toughness, and low-temperature flexibility. The main suppliers of this raw material include large petrochemical companies such as Sinopec, LyondellBasell, Borealis, TotalEnergies, and ExxonMobil.

In 2025, global sales are estimated to be approximately 49.7 million meters, with an average market price of \$5.2 per meter, and an industry gross profit margin in the range of 25-40%.

The main driving factors for the industry stem primarily from the continuous development of its core application areas. For example, in building floor heating systems, PPB pipes are well-suited to low-temperature environments and offer a long service life due to their seamless design, aligning with the trends of energy efficiency and comfort in buildings. Secondly, the expansion of production capacity and diversified

competition in the upstream raw material industry, including the entry of private capital and coal chemical companies, has driven the development of the overall supply chain and improved the availability of raw materials.

However, PPB pipes have shortcomings in terms of high-temperature resistance and long-term pressure resistance, which means they face direct competition and potential replacement from random copolymer polypropylene pipes (PP-R pipes), which offer superior performance in broader application scenarios such as building hot and cold water piping systems.
