The global Polypropylene Cable Ties market size is predicted to grow from US$ 45.2 million in 2025 to US$ 69.37 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Polypropylene cable ties are a cable-binding and securing device made from polypropylene. They offer excellent insulation, chemical resistance, aging resistance, and mechanical strength. By combining the strap body and buckle, they enable quick and secure bundling of cables and wires. They are widely used in electrical equipment, telecommunications cabinets, and building wiring. Polypropylene is a low-cost, lightweight, easy-to-process, and recyclable material, making it an economical and environmentally friendly essential electrical auxiliary material.In 2024, the global production of polypropylene cable ties will reach 203.42 million pieces, with an average selling price of US$214 per thousand pieces, a single-line production capacity of 5 million pieces, and a gross profit margin of 18%.The upstream industries of polypropylene cable ties mainly include polypropylene (PP) resin production, masterbatch and additives (such as anti-UV agents, flame retardants) suppliers. The price and performance of raw materials directly affect the cost, strength and weather resistance of the ties; the midstream is the cable tie manufacturing companies, which are responsible for injection molding, mold development and automated production, and provide products with various specifications, colors and functions (such as detachable, flame retardant); the downstream is widely used in electronics and electrical, communication equipment, building wiring, industrial automation, transportation (automobiles, rail transit) and new energy fields. As a basic cable management auxiliary material, its demand is closely related to manufacturing, infrastructure construction and intelligent development. The overall industrial chain is characterized by large scale, wide application, moderate technical barriers and strong dependence on upstream raw
