Polypropylene yarn has a hygienic structure that does not cause allergic reactions. Moisture formed by sweat and similar causes is thrown out by the breathing structure, it does not hold moisture and water and it does not contain dirt and stain. At the same time, it is in a more advantageous position than many other yarn variants in terms of conversion to nature and reusability. It is a type of yarn that can also be given high strength properties at the required ratios. It has features such as high durability and unbreakability to be gained by the applications made during manufacturing. Due to its technical characteristics, it is not only used by the narrow weaving sector as the most preferred yarn type but also used in many different fields and sectors such as home textile, sock and carpet manufacturing.
