The global Polypropylene Thermoplastic Vulcanizate market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A thermoplastic elastomer made from rubber and thermoplastic polyolefin by dynamic full curing of polypropylene with a curing agent. Because rubber particles (1~5 microns) maintain a reticular structure and exhibit elasticity at both room temperature and processing temperature, thermoplasticity and strength are provided by polyolefin, so their strength, elasticity and heat resistance are better than those of dynamic partially vulcanized thermoplastic polyolefin.
