The global Polypropylene Thread market size is predicted to grow from US\$ 3130 million in 2025 to US\$ 4209 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Polypropylene yarn is a synthetic yarn made from propylene polymers, possessing high tensile strength, chemical resistance, low moisture absorption, and lightweight properties. It is widely used in textiles, industrial sewing, packaging, geotextiles, ropes, fishing nets, and agriculture. Polypropylene yarn is favored for its durability, resistance to mildew and UV radiation, and cost advantage compared to other synthetic fibers. The upstream of the polypropylene yarn industry chain includes suppliers of propylene polymer granules and stabilizers; the midstream consists of manufacturers producing polypropylene yarn through melt spinning, drawing, and twisting processes, sometimes adding dyes or functional additives; downstream applications include textile and apparel manufacturing, industrial sewing operations, rope and net manufacturing, packaging companies, and agriculture, used for reinforcement, fastening, or binding purposes. In 2025, global polypropylene yarn production was approximately 615,000 tons, with an average market price of approximately US\$5,200 per ton. The gross profit margin for polypropylene yarn manufacturers is typically between 12% and 25%. Global polypropylene yarn production capacity in 2025 was approximately 770,000 tons.
