Transparent nucleating agent, also known as plastic transparent agent, is a processing modification agent used to change the crystallinity of incompletely crystalline polymer resin and accelerate its crystallization speed. Product features: It promotes resin crystallization by providing crystal nuclei, making the structure of crystal grains fine, thereby improving the rigidity, heat deformation temperature, dimensional stability, transparency and surface gloss of the product. In addition, plastic transparent agent can shorten the product molding cycle, expand processing conditions, and enhance the surface smoothness of the product.
