Polyquaternium 51 is a skin conditioning ingredient originally developed for the contact lens industry to maintain moisture and counteract dry eye. However, it is now an ingredient used by cosmetic and skin care companies to add moisturizing properties to formulas, while also benefiting from its added film forming properties. Polyquaternium 51 is a 'phospholipid copolymer that improves the moisture retention capability of the epidermis, and also serves as a natural barrier against further water loss from the skin, in part by forming a protective film on the epidermis, according to AMC.
