Abstracts

The global Poly(styrene-divinylbenzene) Particles market size is predicted to grow from US$ 58.93 million in 2025 to US$ 98 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Global sales of polystyrene-divinylbenzene (PS/DVB) particles reached 15,788 tons in 2024, with an average selling price of US$3,571 per ton.

Polystyrene-divinylbenzene (PS/DVB) particles are composite particles made from a mixture of polystyrene and divinylbenzene. These particles are known for their high mechanical strength and chemical stability, and therefore have wide applications in chromatography, catalysis, and other fields. By adjusting the amount of DVB (typically 2%–60%), the degree of crosslinking can be controlled, thereby regulating its pore size, specific surface area, mechanical strength, and swelling properties.

The core raw materials for PS/DVB granules are styrene and divinylbenzene (DVB). Domestic production capacity for styrene is ample, with a price of approximately 7,000–9,000 yuan/ton. Divinylbenzene, due to its difficulty in separation and purification, low monomer content, and high import dependence, is priced as high as 45,000–60,000 yuan/ton, becoming the main cost component. Adding to this the costs of initiators, dispersants, pore-forming agents, and other additives, as well as steam and wastewater treatment fees, the higher the DVB content, the higher the resin cost. For macroporous or electronic-grade products, the raw material cost can account for over 70%.

United States market for Poly(styrene-divinylbenzene) Particles is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
