Polystyrene (PS) latex microspheres are spherical particles made of polystyrene, typically dispersed in aqueous solutions, with sizes ranging from nanometers to micrometers. They can be surface-functionalized (e.g., carboxyl, amine, or hydroxyl groups) to provide specific properties, enabling applications across biomedical, optical, coatings, and composite material fields, serving as carriers for immunoassays, cell labeling, particle size standards, or material fillers. In 2025, global Polystyrene (PS) Latex Microspheres production reached approximately 21060 L, with an average global market price of around 70000 USD/L. The production capacity for Polystyrene (PS) Latex Microspheres in 2025 was approximately 25000 L. The typical gross profit margin for Polystyrene (PS) Latex Microspheres between 20% and 40%.

The global polystyrene (PS) latex microspheres market is steadily growing, driven by increasing demand in biomedical assays, microfluidics, optical devices, and high-performance composite materials. Key players offer products with varying sizes, surface functionalizations, and dispersion forms to meet the diverse needs of research institutions, medical diagnostics, industrial manufacturing, and electronics/optics. The Asia-Pacific region is considered the fastest-growing market due to rapid expansion in life sciences and industrial applications.
