The global Polystyrene Supporters market size is predicted to grow from US\$ 71.71 million in 2025 to US\$ 97 million in 2032; it is expected to grow at a CAGR of 4.2% from 2026 to 2032.

Polystyrene Supporter refers to a class of functional polymer supports widely used in solid-phase synthesis, enabling stepwise coupling reactions by immobilizing initiating groups and providing a stable platform for the large-scale synthesis of oligonucleotides, selected peptides, and other high-value molecules. In terms of applications, polystyrene supporters cover not only industrial-scale DNA, RNA, and various modified oligonucleotide synthesis, but also research-grade, diagnostic-grade, and certain non-oligonucleotide solid-phase synthesis scenarios. Products are generally categorized into standard supporters and modified or pre-loaded supporters, with differentiated specifications in loading capacity, swelling behavior, particle size distribution, mechanical stability, and linker chemical stability, allowing them to meet requirements from process development and scale-up validation to commercial manufacturing. Upstream supply mainly includes styrene monomers, crosslinkers, initiators, and other basic polymer raw materials, as well as functionalization reagents, linkers, and related modification materials. Downstream customers are primarily oligonucleotide CDMOs, nucleic acid drug developers, and synthesis reagent manufacturers, with additional demand from research institutes and molecular diagnostics service providers. Commercial opportunities are driven by the continuous expansion of nucleic acid therapeutic pipelines, increasing demand for high-value modified oligonucleotides, and rising customer requirements for batch consistency, traceability, and regulatory documentation. On an ex-works basis, effective global capacity for polystyrene supporters in 2025 is estimated at approximately 5,800 kg, with sales volume of about 4,920 kg and a weighted average ex-factory price of around USD 14.9 per gram. Owing

to differences in application mix and depth of functionalization, gross margins for the overall segment typically range from 35% to 55%, with high-specification and modified supportors used in oligonucleotide synthesis contributing the majority of industry profits.

United States market for Polystyrene Supportors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Polystyrene Supportors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
