The global Polytetrafluoroethylene Anti-dripping Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

PTFE Anti-dripping agent is mainly used in plastic materials that require flame retardant grade up to V0. It can prevent melting dripping and improve flame retardant performance.

The early anti-dripping agents were chlorinated polyethylene, silicone rubber and other products. Due to the problems of environmental protection, operability and migration, they were gradually replaced by high molecular weight polytetrafluoroethylene (PTFE) and became the mainstream of the market.
