The global Polythiol Epoxy Curing Agent market size is predicted to grow from US\$ 147 million in 2025 to US\$ 238 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Polythiol epoxy curing agents are additives that rapidly cure epoxy resins at room temperature or low temperatures. Their main characteristics are rapid curing speed, typically reaching usable strength within minutes, and suitability for low-temperature and humid environments. Upstream raw materials include epoxy resin, β -mercaptopropionic acid, and pentaerythritol. Downstream applications span multiple industries, including electronics, automotive manufacturing, construction, and aerospace. Global sales in 2024 were approximately 18,000 tons, with an average market price of approximately US\$7,800 per ton. Industry gross profit margins range from 15% to 30%.

Polythiol epoxy curing agents are indispensable in applications requiring high-efficiency production due to their excellent low-temperature, rapid curing properties.

Simultaneously, increasingly stringent global environmental regulations are driving market demand for high-efficiency polythiol systems with low odor and low volatile organic compounds (VOCs). The production of polythiol epoxy curing agents requires advanced technology. Currently, manufacturers in Europe, the United States, and Japan lead in terms of production capacity and technological development. The relatively high price of polythiol curing agents directly limits their widespread application in cost-sensitive sectors.
