The global Polyurethane Adhesive for Power Batteries market size is predicted to grow from US\$ 193 million in 2025 to US\$ 360 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

Polyurethane adhesives offer a good blend of cohesive strength and flexibility which makes them very tough, durable adhesives. Polyurethanes bond well to most unconditioned substrates but may require the use of solvent-based primers to achieve high bond strengths. They offer good toughness at low temperatures, but typically degrade in strength after long-term exposure over 302 °F (150°C). Polyurethane adhesives are supplied as one- and two-part systems in a wide range of viscosities. They cure to form thermoset polymers with good solvent and chemical resistance. It can be used in battery pack assembly in the new energy field.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
