Polyurethane Integral Skin Foam, also known as 'self-skinning foam,' is a type of molded foam featuring a dense, durable outer skin and a flexible or rigid core. This foam is formed during the molding process, combining a soft, cushioning interior with a tough, tear-resistant outer surface. The outer skin offers resistance to wear, impact, and moisture, making it ideal for applications requiring both aesthetics and functionality, such as automotive parts, furniture, medical devices, and protective padding. Additionally, integral skin parts can be customized with color matching, textured finishes, and graphics, often mimicking leather or other patterns.
