The global Polyurethane Mold Sealant market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Polyurethane mold sealant is a sealant with polyurethane rubber and polyurethane prepolymer as the main components. Polyurethane mold sealant combines the two functions of sealing and bonding, and is mainly used to fill gaps (such as holes, joints, seams, etc.). It has high tensile strength, excellent elasticity, wear resistance, oil resistance, and cold resistance. It has a long service life and good weather resistance, and its service life can usually reach 15 to 20 years. Compared with other high-end sealants, polyurethane sealants are moderately priced and cost-effective.

With the development of industries such as construction, automobiles, and aerospace, the demand for high-performance sealing materials continues to increase. Polyurethane sealants are widely used in these fields because of their high temperature resistance, chemical resistance, and good adhesion properties. The raw materials used in the polyurethane sealant industry are mostly petroleum derivatives, which are easily affected by commodity price fluctuations. However, the polyurethane mold sealant market still shows a trend of sustained growth worldwide.
