Abstracts

The global Polyvinyl Chloride (PVC) Membranes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Global polyvinyl chloride (PVC) membranes market is expected to grow over the forecast period on account of its increasing applications in emerging economies including Brazil, India and China. PVC membranes are used in a wide range of applications such as construction & building, packaging & transportation, electronics & electrical and automotive & aerospace industries. Expansion of the global construction & building industry owing to surging infrastructure expenditure is expected to drive PVC membranes market over the next seven years mainly in India and China. PVC membranes are expensive and presence of stringent regulations in the developed economies of European Union and North America is expected to be a potential factor for hampering market demand over the forecast period. In addition, increasing crude oil prices are expected to hinder the PVC membranes market over the forecast period as PVC is derived from ethanol. Emergence of bio-based PVC membranes which have a recycling capacity up to seven times and have a lifespan over one hundred and forty five years is expected to open new opportunities for PVC membranes market growth over the forecast period.

Global PVC membranes market has observed substantial gains in past five years owing to growing demand in applications such as waterproofing sheets, roofing, flooring,

siding and protective layering. In addition, increasing demand for PVC membranes in medical devices and automobiles is further anticipated to fuel its demand. Global PVC membranes market has witnessed a decline in its demand owing to the economic recession that had affected major industries such as transportation, electrical & electronics and construction. As a result, the price of PVC membranes witnessed a drop in Asia Pacific, European Union and North America. PVC membranes prices are likely to rise owing to increase in prices of its feedstock, natural gas and oil over the next seven years.
