The global POM Bushing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

POM bushings are molded bushings. Compared to (ball) bearings, POM bushings have advantages in terms of cost, ease of installation, lightweight, and space saving.

POM bushings are applicable to any movable shaft because they allow rotation and linear motion between the shaft and housing. They are used to secure the shafts of mini 4-wheelers and toys, as well as the movable shafts of various parts of household appliances and automobiles.

POM bushings have higher sliding resistance and lower load capacity than bearings, but they are also available at low cost, require little additional space, and simplify installation and maintenance, such as fitting and lubrication. The POM bushing is a simple and cost-effective solution.

United States market for POM Bushing is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
