The global Pool Vacuum Robot market size is predicted to grow from US\$ 678 million in 2025 to US\$ 1246 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

In 2024, global Pool Vacuum Robot reached approximately 647,043 units, with an average global market price of around US\$ 1045 per unit. Gross margin is about 38%. The cost is 648 usd. Production Capacity is about 700,000-800,000 units. Pool Vacuum Robots are small wheeled machines that crawl along the surface of the pool and clean it automatically. They are composed of a small electric motor and a container to collect debris. The motor generates suction to remove dirt and debris and allows the machine to climb up the pool wall.

Future pool robots will increasingly rely on sensor fusion and navigation algorithms to achieve more precise path planning, obstacle avoidance, and coverage optimization. The shift from 'random cleaning' to 'intelligent planning' is a definite trend. Some high-end products will possess the ability to automatically identify pool type, assess soiling levels, and implement adaptive cleaning strategies, evolving towards 'unmanned' and 'higher efficiency.'

Cordless operation, improved battery life, and fast charging technology will become standard features, resulting in smaller, lighter, and more convenient devices. Simultaneously, the lifespan of filtration systems and consumables will be extended, reducing the frequency of manual cleaning, improving user experience, and driving pool robots from 'professional equipment' to 'home consumer electronics.'

As costs decrease, pool robots will gradually become more common among mid- to low-end home users, while the demand for high-load, 24/7 professional models in commercial pools, hotels, and resorts will continue to grow. The future market structure

will show a parallel trend of 'increased sales volume in the home market + high-end development in the commercial market', forming a multi-level product matrix.
