The global Porcine Pancreatin market size is predicted to grow from US\$ 94.27 million in 2025 to US\$ 146 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Pancreatin is a mixture of several digestive enzymes produced by the exocrine cells of the pancreas. Pancreatin is usually obtained from the pancreas of pigs or cows. The pancreas is an organ in animals and people that makes chemicals - amylase, lipase, and protease - that are needed for proper digestion. This mixture is used to treat conditions in which pancreatic secretions are deficient, such as surgical pancreatectomy, pancreatitis and cystic fibrosis. This report studies pancreatin from porcine pancreas.

Porcine pancreatin is widely used in pharma industry, food processing and other field. Among them, pharma industry occupies a large market share. Pancreatin supplies pancreatic enzymes in chronic pancreatic insufficiency. It is used in cystic fibrosis, acute and chronic pancreatitis, pancreatectomy or total gastrectomy, pancreatic duct obstruction, and G. I. bypass surgery. With regard to pancreatic insufficiency in these conditions pancreatin is particularly useful in re-establishing natural digestive conditions and controlling steatorrhea.
