The global Porcine Plasma Powder market size is predicted to grow from US\$ 1425 million in 2025 to US\$ 2028 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Plasma powder is a high-quality animal protein source that can be used to improve the texture of extrudates, chunks, and pate. It has a protein content of more than 70%, a fat content of less than 2.5%, and a mineral content of 2%. It is a completely digested component with a modest calorific content (4 kcal/g). Porcine is called Pork flesh which has a strong nutritional profile in addition to being tasty. Porcine-derived spray-dried plasma is rich in protein and a popular ingredient in canned pet food due to its physicochemical qualities.

Pet food producers are concerned about the increase in demand for new ingredients, as well as the increase in the adoption of pets. Furthermore, ingredient considerations are a crucial issue in boosting pet food palatability, particularly for cats, in creating the optimum texture. Plasma powder manufacturers are proactively focusing on introducing new product ranges to deliver efficient plasma powder solutions for pets to create a marketplace in the pet food industry. This is creating lucrative business opportunities for the manufacturers operating in the market.
