Portable air tritium monitor is a handheld device used to measure the concentration of tritium gas in the air. Tritium is a radioactive isotope of hydrogen, which is usually used in nuclear reactors, nuclear weapons and other applications. Portable air tritium monitor is an important tool for monitoring tritium levels in the air to ensure the safety of workers and the environment. The working principle of a portable air tritium monitor is to suck air into the equipment and measure the concentration of tritium gas through a detector.

Detectors typically use scintillation counters or proportional counters to detect tritium particles and generate electrical signals proportional to the tritium concentration in the air. This device has been calibrated to provide accurate and reliable tritium concentration measurement, with a measurement range of several nanometers per cubic meter to several thousand nanometers per cubic meter. Portable air tritium monitor is a portable and easy-to-use device that can be used for a wide range of applications, including nuclear power plants, research facilities, and nuclear waste storage sites. It is designed to work reliably and accurately under various environmental conditions, including high radiation and high temperature.
