The global Portable Automated External Defibrillators (AEDs) market size is predicted to grow from US\$ 957 million in 2025 to US\$ 1703 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

Portable Automated External Defibrillators (AEDs) are compact, life-saving medical devices designed to treat sudden cardiac arrest (SCA). AEDs automatically analyze a patient's cardiac rhythm and, when necessary, deliver an electrical shock (defibrillation) to restore a normal heartbeat. In 2025, global Portable Automated External Defibrillators (AEDs) production reached approximately 646.31 K Units. The upstream segment mainly includes suppliers of medical batteries, capacitors, PCB boards, ECG sensors, electrode pads, semiconductor chips, displays, plastics, and embedded software algorithms.

Portable Automated External Defibrillators (AEDs) are critical emergency medical devices used to treat sudden cardiac arrest (SCA). Driven by expanding public-access emergency response systems, the global AED market has experienced steady growth in recent years. AEDs are designed to automatically analyze cardiac rhythms and provide guided defibrillation through voice prompts, enabling both trained professionals and laypersons to respond rapidly during cardiac emergencies. AEDs are now widely deployed in airports, schools, stadiums, shopping malls, transportation hubs, industrial facilities, and community public-access locations.
