A portable ballet barre is a stationary stand that provides support for ballet dancers during various types of exercise. It an essential part of a ballerina's training routine. It is also used by fitness enthusiasts and other types of dancers.

Ballet is a popular type of court dance performed by specially trained dancers. In the 17th century, Louis XIV made ballet popular by promoting its performance on stage. There are two types of barre: fixed ballet barre and portable ballet barre. A portable ballet barre is more convenient for use at home. A portable ballet barre can come with single or double rails. It also offers height adjustment. Some barres can also be mounted on the wall. Handrails of portable ballet barres are made raw materials such as PVC, aluminum, metal, wood, and plastic. However, portable ballet barres made of plastic are not safe and durable. Demand for portable ballet barres made with PVC handrails is high due to durability, as handrails made of wood and metal can get cracked and are cold to touch. Choosing a suitable probable ballet barre depends on multiple parameters such as quality, durability, practicality, safety, raw material, height adjustment feature, and price. The global portable ballet barre market is expected to expand at a considerable pace in the near future.
