A portable blackbody temperature calibrator serves as a standard radiation source for infrared thermometers and thermal imaging systems. By simulating stable thermal radiation that closely approximates that of an ideal blackbody, it enables the precise calibration and verification of devices such as infrared thermometers and thermal imagers. Typically equipped with an adjustable temperature control system, highly stable heating and cooling modules, and a high-emissivity cavity structure, this device provides a standard temperature reference in both field and laboratory settings. Consequently, it facilitates the correction of measurement errors and enhances temperature measurement accuracy, finding widespread application in industrial inspection, scientific metrology, and the calibration of infrared equipment. In 2025, projected sales volume stands at 85,000 units, with an average selling price of \$5,245, a total production capacity of 100,000 units, and a gross margin of 38%.
