Portable Breath Testers are handheld devices designed to estimate blood alcohol concentration (BAC) from a breath sample. These devices are used to determine if a person has consumed alcohol and to estimate their BAC level. Portable breath testers operate by having the user exhale into a mouthpiece, where sensors detect the presence of alcohol in the breath. The device then provides a digital readout indicating the estimated BAC. They are widely used by law enforcement for roadside testing, in workplaces for safety checks, and by individuals for personal monitoring.
