Portable Cardiac Event Recorder, also known as an ambulatory electrocardiogram (ECG) monitor or event monitor, is a small, lightweight device that is used to continuously record the electrical activity of the heart over an extended period of time. It is typically worn by patients who experience intermittent cardiac symptoms, such as palpitations, dizziness, or chest pain, that may not be captured during a routine ECG. The recorder is equipped with sensors that are attached to the patient's chest and can detect and store abnormal heart rhythms or other cardiac events. Data from the recorder can then be transmitted wirelessly or via a cable to a computer for analysis by a healthcare provider. The Portable Cardiac Event Recorder is an important diagnostic tool that helps physicians detect and manage cardiac arrhythmias and other heart conditions.

The global Portable Cardiac Event Recorder market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
