The global Portable CNC Plasma Cutting Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The portable CNC plasma cutting machine is a CNC cutting equipment that uses high-temperature plasma sparks to cut metal materials. It usually consists of cutting machine tools, guide rails, power systems, control systems, and plasma cutting guns. This equipment not only has the characteristics of high efficiency, accuracy and stability, but also has the advantages of portability and flexibility. The working principle of the portable CNC plasma cutting machine is to use the plasma arc generated by the gas discharge to cut the metal material into the desired shape. During the cutting process, the gas is injected into the plasma cutting torch, and the high-temperature plasma generated by the arc melts the metal material, and blows it away through the high-pressure airflow, thereby completing the cutting operation.

United States market for Portable CNC Plasma Cutting Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
