Portable Combustible Gas Detectors are compact gas-sensing devices utilizing electrochemical, catalytic combustion, infrared absorption, or semiconductor principles to monitor and alarm the real-time concentration of combustible gases (e.g., alkanes, alkenes, hydrogen) in environments. Integrating sensor modules, signal processors, and audible-visual alarms, they enable lightweight, modular, and battery-powered operation for handheld, wearable, or portable deployment in dynamic scenarios such as industrial inspections, confined-space operations, emergency responses, and civilian safety protection. By employing non-contact sampling and rapid response mechanisms, these detectors identify gas leakage risks in complex environments, providing critical technical support for personnel safety and disaster prevention.

Typical products include:RIKEN KEIKI's GX-6000, etc.
