The global Portable Cordless Heat Guns market size is predicted to grow from US\$ 743 million in 2025 to US\$ 1057 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

A portable cordless heat gun is a handheld heating tool that uses a rechargeable lithium battery as its power source and can work without an external power cord. It heats the air through a built-in heating element and sprays out a high-temperature airflow at a controllable wind speed. In 2025, global Portable Cordless Heat Guns production reached approximately 10,854 k units, with an average global market price of around 70 US\$/Unit. The production capacity of Portable Cordless Heat Guns reaches 13,500 k units, and the industry's gross profit margin is approximately between 20% and 40%.

The market demand for portable cordless heat guns continues to rise, primarily driven by multiple factors, including increased demands from professional users for operational flexibility and mobility, the trend towards platform-based power tools leading to the widespread adoption of battery-compatible devices, the growth of DIY culture and home repair needs, the inconvenience of power access at construction sites or in outdoor environments spurring the development of wireless solutions, and advancements in lithium battery technology resulting in higher power density and longer battery life. Meanwhile, the increasing use of automotive electronics, small appliance repair, and emergency response has further increased the reliance on lightweight, ready-to-use hot air tools, prompting this category to evolve rapidly from auxiliary tools to mainstream handheld devices.
