Portable electrochemical gas detector is a kind of electronic instrument that uses an electrochemical sensor to detect and measure the concentration of various toxic or combustible gases in the ambient air. The electrochemical sensor works by generating a small electrical charge between two electrodes when the target gas is present, and the signal strength is proportional to the gas concentration. The detector can display the gas concentration on a screen or transmit it wirelessly to a remote device. A portable electrochemical gas detector can be used for personal protection, industrial safety, environmental monitoring, and other applications.
