A portable fiber optic oxygen meter is a device that measures the concentration of oxygen in a given sample using fiber optic technology. The device uses an optical sensor, which is based on the principle of fluorescence quenching.The device consists of a handheld unit that contains the optical sensor and a display screen that shows the oxygen concentration reading. The handheld unit is connected to a fiber optic probe that is inserted into the sample being measured.Portable fiber optic oxygen meters are commonly used in industrial settings, such as in the monitoring of oxygen levels in fermentation processes and in environmental applications where oxygen levels need to be measured in remote locations. They are also used in medical settings for the monitoring of oxygen levels in patients with respiratory disorders.
