The global Portable Flame Ionization Detector market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Portable Flame Ionization Detector (FID) is a handheld analytical instrument used in environmental monitoring, industrial hygiene, and safety applications. It is designed to detect and measure the concentration of organic compounds, particularly hydrocarbons, in ambient air or gas samples. The FID operates on the principle of combustion, where the sample is burned, and the resulting ions generated in the flame are measured to determine the concentration of target compounds.

The Portable Flame Ionization Detector market has witnessed substantial growth in recent years due to its critical role in environmental monitoring, occupational safety, and various industrial applications. It is widely used in industries such as petrochemicals, oil and gas, environmental testing, and manufacturing for its ability to detect volatile organic compounds (VOCs) accurately and swiftly.
