The global Portable Flexible Screen market size is predicted to grow from US$ 658 million in 2025 to US$ 948 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

In 2025, the global production volume of portable flexible screens reached 1.318 million units, with an average selling price of US$510 per unit. The global annual production capacity for portable flexible screens was approximately 2.2 million units, with a gross margin of about 30.7%.A portable flexible screen (also known as a mobile smart screen) is a movable large-screen terminal device that integrates multiple functions, including those of a smart tablet, smart TV, learning machine, and fitness mirror. Its core features include: a screen size typically ranging from 18 to 32 inches, a dedicated stand that supports lifting, rotating, and angle adjustment, universal wheels at the base, battery-powered operation, and a built-in smart operating system with support for touch interaction, voice control, and wireless screen casting. This product breaks the limitations of traditional TVs that are fixed in one location, allowing users to move it freely to various scenarios within the home (such as the living room, bedroom, or kitchen) or outdoors, to meet diverse needs including video streaming, learning, fitness, office work, and entertainment.The upstream of portable flexible screens includes IPS-LCD panels, touch sensors, and main control chips. The midstream consists of portable flexible screen manufacturers, and the downstream primarily covers home entertainment, health management, and home learning applications.

As an emerging category in the smart hardware sector, the portable flexible screen (also known as a mobile smart screen) is currently in a rapid market introduction phase. By integrating the functions of multiple devices such as smart tablets, TVs, and learning machines, and breaking the location limitations of traditional screens through movable

stands and flexible adjustment designs, the product precisely addresses the demand for multi-scenario home use. At present, a relatively complete collaborative system has been formed across the upstream and downstream of the industry chain, with stable supply of core components such as panels and chips in the upstream, scalable production capacity in the midstream manufacturing sector, and continuously growing consumer awareness in the downstream market. In terms of product evolution, the market is moving toward larger screen sizes, higher resolutions, and enhanced interactivity, while the integration of AI technologies has opened up new possibilities for application scenarios such as fitness guidance and smart home control. Overall, the portable flexible screen market is at a critical stage of transitioning from early adoption to mass-market acceptance, with broad prospects for future growth.
