The global Portable Household Energy Storage market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

As the demand for renewable energy sources such as solar and wind power increases, portable home energy storage is a key component in storing and utilizing these energies, which can help individuals and households capture, store and use renewable energy, providing more sustainable and independent energy solutions. Coupled with the emphasis on renewable energy and energy storage by the government and environmental protection agencies, it provides more policy support and impetus for portable household energy storage devices. Rising environmental awareness is also driving the demand for green energy solutions, and portable home energy storage devices fit into this trend.

According to the data of GGII, China's household energy storage lithium battery shipments will reach 25GWh in 2022, a year-on-year increase of more than 3.5 times. In 2022, the conflict between Russia and Ukraine will intensify energy anxiety, and the demand for household energy storage will grow rapidly. Since 2021, the European market has been affected by rising energy prices, the price of electricity for residents has risen rapidly, and the economy of energy storage has been reflected, and the market is very hot. In 2021, Germany will add 145,000 sets of household photovoltaics, with an installed capacity of 1.27GWh, a year-on-year increase of 49%.

It is expected that global home energy storage will maintain rapid growth in the next few

years, with the largest demand in the European and American markets, followed by China, Japan, etc. The market will present greater business opportunities in the future.

Portable household energy storage refers to an energy storage device that can be carried and used to provide convenient power supply for individuals or families.
