The global Portable Ion Concentration Meter market size is predicted to grow from US$ 283 million in 2025 to US$ 508 million in 2031; it is expected to grow at a CAGR of 10.3% from 2025 to 2031.

Portable ion concentration meter is a miniaturized measuring instrument made of modern electronic technology. It can measure, analyze and calculate the ion concentration of a certain volume of aqueous solution or other liquid, so as to obtain the ion concentration of the liquid. Its measurement principle is based on electrochemical cell measurement technology, that is, the electrodes in the electrochemical cell react with the measured fluid, and the ion concentration in the fluid is determined by measuring the current generated by the reaction.

The market for portable ion concentration meters is growing continuously. With the advancement of science and technology and the continuous expansion of application fields, the market demand for portable ion concentration meters is also increasing. Especially in the fields of environmental protection, water resources management, medical treatment, food and chemical industry, the application prospects of portable ion concentration meters are broad, and the market scale is expected to expand further.
