A portable IONM (Intraoperative Neurophysiological Monitoring) system is a compact and lightweight device that is used to monitor the integrity of the nervous system during surgical procedures. IONM helps the surgical team to identify and prevent potential damage to the nervous system during the procedure. It provides immediate feedback on the function of the nerves and allows the surgeon to make adjustments as needed to minimize the risk of injury. IONM is commonly used in surgeries involving the brain, spine, and peripheral nerves, such as spinal fusion, brain tumor resection, and peripheral nerve repair. It has been shown to reduce the risk of neurological complications and improve patient outcomes. Overall, intraoperative neuromonitoring is a valuable tool that enhances the safety and effectiveness of surgical procedures involving the nervous system.
